This powerpoint is Judith Kuster's part of a panel honoring the contributions of our "Foremothers" in speech-language pathology

Foremothers of the Speech Pathology Profession Judith Duchan, Nan Bernstein Ratner, Jane Fraser, Judith Kuster, and Marian Sheehan

ASHA 2005

With gratitude to Judith Duchan, Mary Ambroe, ASHA Magazines and Google internet search for the pictures and much of the material.

My section is dedicated to one of my personal foremothers, Lois Nelson, who is a person who knew several of the people who were influential in the early days of our profession, and from whom I learned who many of them were!

I asked my graduate students (and ask you the same question)

Ray Kent's advice to Remember our Heritage

• "... a void that I think is serious as we try to understand the development of our Association and the evolution of the discipline of communicative disorders. . .Very few academic programs in communicative disorders succeed in giving their students an appreciation of their academic heritage. . .. Our Association – and the discipline it represents – is old enough now for some serious retrospection. We still have among us many who were personally acquainted with the men and women who shaped the early history of our discipline. These people can give us more than statistics on growth of membership and summaries of scientific and professional controversy. They also give us an awareness of the personalities of the men and women who set out to establish training programs, research laboratories, and professional academies." Kent, 1982

What is past is prologue
